

INTEGRATED OPERATIONS

We design, build, own and operate multimodal logistics chains that link inland areas of production and consumption to our network of inland ports and deep sea terminals. Safety, reliability and efficiency are at the core of what we do. Our operations throughout the world meet or exceed international standards and give our customers unprecedented access to international markets.

INLAND AREAS OF PRODUCTION AND CONSUMPTION

Impala manages the logistics to or from areas of production and consumption such as mines, oil fields and factories. The value added services include load management, freight forwarding coordination and customs clearance services.

IMPALA TERMINALS – INLAND

We own and operate inland terminals which offer bonded and non-bonded reception, storage, customs clearance, dispatch and other value-added services for bulk, break bulk, containerised and liquid cargoes. These facilities move the point of import and export closer to our clients, thus improving the efficiency, reliability and cost of the overall logistics chain.

MULTIMODAL LOGISTICS

Our owned and operated inland multimodal logistics networks comprise fluvial, rail and road assets with direct connections to our inland terminals. Longer distance transfers of cargo by barge or rail are significantly more efficient and cost effective than the equivalent journey by truck, allowing Impala to transfer large volumes of cargo safely, reliably and economically.

IMPALA TERMINALS – SEA PORTS

We own and operate deep-sea terminals for containers, liquid and bulk cargoes capable of providing reception, storage, blending, sampling and dispatch services.

INTERNATIONAL MARKETS

By creating direct connections to our inland logistics networks, we are able to provide effective, reliable and economic access to and from international markets.
